## Leaky Pipes are Expensive

One of the most obvious areas where problems arise with piping is at the connection. As many of us have experienced, it isn't necessarily obvious. However, one indication is the increase of energy costs or product loss. If you notice an increase of energy consumption with the same/similar production, be sure to check the connections. A small leak in one or more areas can make an impact on your energy costs.

Any type of pipe valve or fitting are subject to leaks. Temperature change, vibrations and other conditions contribute to the cause of leaks. There is an opportunity to reduce the risk of leaks by using quality connections that are installed by a technically trained, pipefitters.

These piping experts know the importance of design, installation and maintenance for your particular application in order to enhance the systems overall performance. Be sure you talk to ACSI Mechanical about our qualified technicians and pipefitters.

## Did you Get Your Complimentary White Paper "Gaining Efficiencies with a Boiler OR Burner Replacement"

White Paper:

Gaining Efficiencies with a Boiler OR Burner  
Replacement

Serving Chicago Since 1949

Visit  
[www.ACSIGroup.com/  
boiler\\_burner.aspx](http://www.ACSIGroup.com/boiler_burner.aspx) to  
download the white  
paper.

While you're there,  
find out how you can  
buy a new burner with  
no capital money.  
Begin saving right  
away this fall.

## Keep It On Ice

Just because the summer has been mild,  
doesn't mean your chiller and air conditioner  
isn't working hard.

Be sure to continu-  
ously check on the  
lines for leaks. It  
can mean the  
difference between  
saving energy and  
money and wasting  
it unnecessarily.
