If it's working fine, why bother with annual service?

There weren't any issues this year, everything seems to be working in top shape. "Why should I bother with annual service?" Either we have said it, or have heard others say this common phrase.

Keep in mind that when a piece of equipment is running continuously day after day, it's important to keep it working in top condition. The primary reason is efficiency and safety.

Deposits build up and reduce efficiency in the system resulting in loss of valuable energy and higher costly bills. Save your company money by eliminating unwanted problems. Have your heating boiler, production boiler, and/or heating system serviced on a regular basis.

Annual service will also reduce unnecessary system break downs and prolong equipment life. We can fix the small problems before they become large problems. Are you willing to take the chance of having your system fail? **Contact us today at 773.737.9200.**

Did you know...

Did you know ACSI is a member of the Healthcare Engineers Society of Northern Illinois (HESNI)?

ACSI works with many hospitals in the area and have helped to keep critical systems working. Who knows...maybe a loved one was comfortable and safe because of an ACSI well maintained system. Find out more.

The Green Mechanical Council's mission is to educate contractors, field technicians, and industry leaders about creating and maintaining environmentally mechanical systems.

American Combustion has received the HVAC Benchmark of Technical Excellence certificate. We are ready to help you learn the many cost saving ways of going 'Green'.

Call us today. We'll share with you some great tips and techniques used by ACSI on going...and maintaining green.
